# Chapter 01

## Electrical Test & Tag

### WHAT IS IT:

Test and tagging is the generic name given to the process of visually inspecting and electrically testing in-service electrical equipment for personal safety. The purpose of test and tag is to determine if the appliance is electrically safe for use

### O H & S

Each year hundreds of lives are saved due to timely testing & tagging of electrical equipment. This not only helps in saving lives, but also can reduce the risk of lengthy insurance claim in the event of a tragedy.

### INSURANCE

By getting your workplace tested and tagged, and receiving the correct reports will ensure your business meets its insurance requirements, regarding test and tag. This could also result in a lower insurance premium.

“ I suffered a severe electric shock in the workplace and spent significant time in the hospital and at home in bed recovering. I am now committed ensuring that others do not suffer the pain I experienced or worse. ”

Brooke Hanson  
Olympic Swimmer

## Chapter 02

# General Fire Protection

### WHAT IS IT:

A building may contain some or all of the following features: fire extinguishers. fire hose reels. fire hydrant systems and automatic sprinkler systems

Fire extinguishers and fire hose reels are provided as a 'first attack' firefighting measure, and would generally be used by the occupants of the building. Fire hydrant systems are installed in buildings to help firefighters quickly attack the fire.

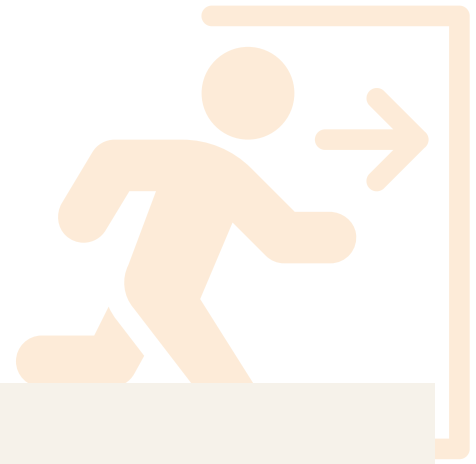

### WHAT CAN YOU DO:

Ensure the service provider is suitable qualified and trained to carry out the servicing. Fire extinguisher, fire hose reel and fire hydrant servicing is to be conducted every 6 months in accordance with AS1851-2012, AS2444-2001

# Chapter 03

## Emergency / Exit Lights

### WHAT ARE THEY:

Exit and emergency lighting are fixtures with a battery packs that turns on automatically when the building loses power. In the event of an emergency, these lights play a significant role in this safety of occupants. In the event of power failure Emergency lights will illuminate to visually indicate the fastest and safest route out of a building for occupants.

### WHAT YOU CAN DO:

You can ensure you have a suitable trained company performing 6 monthly inspection and servicing of your emergency lighting system. To ensure they are working in the event they are needed.

“ By failing to prepare you are preparing to fail. ”

Benjamin Franklin

# Chapter 04

## RCD Safety Switches

### WHAT ARE THEY:

An RCD or also known as a Residual current device, it acts as a life-saving device; it detects and stops the power in an electrical socket preventing dangerous electric currents and fatal electric shocks. RCD's are usually located on a switchboard but can be found in portable devices.

### WHAT CAN YOU DO:

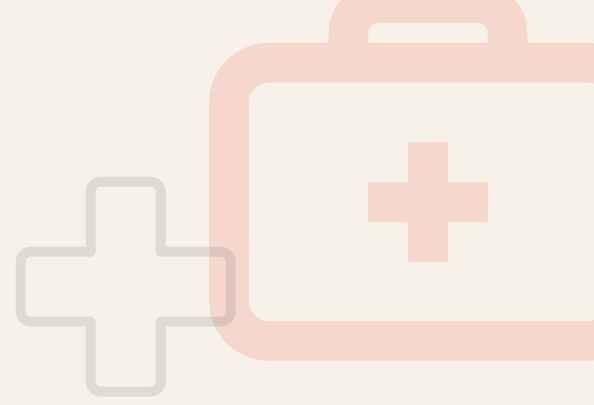

All workplaces that have RCDs should enlist in regular RCD safety switch testing to ensure they are working correctly.

“Electricity can turn you off.”

# Chapter 05

## First Aid Kits

### WHAT ARE THEY:

A first aid kit is a cabinet box, bag or soft pack that holds supplies used to treat minor injuries including cuts, scrapes, burns and sprains.

### WHERE CAN THEY BE USED:

First aid kits can be used in any work place, kits can be tailored to the specific nature, size and risk of the business.

### WHO NEEDS IT:

All businesses are required to provide and maintain a safe work environment, this includes carrying a suitable first aid kit/s for your specific work environment. Whether it be for a low-risk office environment or a high risk workshop environment.
